

New Century Energy Corp. Announces Signing Definitive Purchase Agreement to Acquire Additional Natural Gas Interests in Wishbone Field, McMullen County, Texas

HOUSTON, TX- 7 September 2005- New Century Energy Corp. (OTCBB: NCEY) has signed a definitive Purchase and Sale Agreement to acquire an additional 7.25 percent working interest in the Wishbone Field in McMullen County, Texas thereby increasing NCEY's total ownership to 13.45 percent in this field. Net natural gas reserve potential to New Century Energy will increase to more than 10 BCF in this field. Closing of this acquisition is scheduled to occur on or before September 20, 2005, with an effective date for ownership of July 1, 2005. US Enercorp LTD of San Antonio, Texas is the operator of the Wishbone Field.

Located 80 miles south of San Antonio, Texas the Wishbone Field was discovered in January 2004. This gas field produces from Wilcox sands from a depth of 12,800-14,400 feet, with cumulative production through August 2005 of 14 Billion Cubic Feet (BCF). Current daily production in the Wishbone field is averaging in excess of 30 million cubic feet of gas per day (MMCFG per day).

New Century's President and CEO Edward DeStefano stated, "We are very excited about the additional growth potential for our Company from this timely strategic acquisition of Proved Developed Producing (PDP) reserves. The Lindholm-Hanson Gas Unit #10 well started producing in August 2005, with current daily production rates in excess of 13 MMCFG per day."

"We also anticipate additional new production from the Lindholm-Hanson Gas Unit #11 that reached total depth (TD) and was logged last week, with production testing scheduled for mid September," added Mr. DeStefano.

New Century Energy Corp. has executed a term sheet for additional financing to close the acquisition under terms of a new Securities Purchase Agreement with Laurus Master Fund, Ltd., which funds will be utilized to close this acquisition. "A significant feature to our relationship with Laurus, is that NCEY has the capability to react quickly when new opportunities arise," commented DeStefano.

Development of the Wishbone Field is based on a recent 3-D seismic survey. The estimated 8/8ths ultimate recovery for this field is currently projected to be more than 120 BCF based on independent evaluations prepared by R. A. Lenser & Associates, P.E.

About New Century Energy Corp.

New Century Energy Corp. is an oil and gas exploration and production company headquartered in Houston, Texas concentrating on domestic activity. The Company currently owns interests in over 4,500 acres throughout Texas, with ownership and operations in natural gas producing fields, such as South Sargent in Matagorda County, Wishbone Field in McMullen County and oil producing acreage in the San Miguel Creek and Tenna oil fields in McMullen and Wharton Counties, Texas.

Forward-Looking Statements

This press release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 (the "Act"). In particular, when used in the preceding discussion, the words "believes," "expects," "intends," "will," "anticipated," or "may," and similar conditional expressions are intended to identify forward-looking statements within the meaning of the Act, and are subject to the safe harbor created by the Act. The Securities and Exchange Commission has generally permitted oil and gas companies in their filings with the SEC to disclose only proved reserves that a company has demonstrated by actual production or conclusive formation tests to be economically and legally producible under existing economic and operating conditions. We use the terms probable and possible reserves, reserve potential or upside or other descriptions of volumes of reserves potentially recoverable through additional drilling or recovery techniques that the SEC's guidelines may prohibit us from including in filings with the SEC. These estimates are by their nature more speculative than estimates of proved reserves and accordingly are subject to substantially greater risk of being actually realized by the Company. Except for historical information, all of the statements, expectations and assumptions contained in the foregoing are forward-looking statements that involve a number of risks and uncertainties. The reserve data included herein represents only estimates. Reserve engineering is a subjective process of estimating underground accumulations of oil and natural gas that cannot be measured in an exact manner. As a result, estimates of different engineers often vary. The estimates of reserves, future cash flows and present value are based on various assumptions, including those prescribed by the SEC relating to oil and natural gas prices, and are inherently imprecise. Our reserves and future cash flows may be subject to revisions based on many factors. It is possible that the assumptions made by management are not necessarily the most likely, and may not materialize, including but not limited to the possible undeveloped gas reserve. In addition, other important factors that could cause actual results to differ materially include the following: business conditions and the amount of growth in the Company's industry and general economy; competitive factors; ability to attract and retain personnel; the price of the Company's stock; and the risk factors set forth from time to time in the Company's SEC reports, including but not limited to its annual report on Form 10-KSB; its quarterly reports on Forms 10-QSB; and any reports on Form 8-K. New Century Energy Corp. (OTCBB:NCEY) takes no obligation to update or correct forward-looking statements, and also takes no obligation to update or correct information prepared by third parties that is not paid for by the Company.
